

How can our world move forward towards Progress, Prosperity and Peace and will become a Heaven?

1. When food, clothing, housing, education, health services, security, electricity, water and transport will be easily available to every citizen of each country.
2. When every student, farmer, labourer, employee, businessman / self-employed, will get a guarantee of livelihood. Along with this the lives of disabled (which includes orphans, old and handicapped) that depend on anyone of the above sections will be happy.
3. When there will be equality in the citizens of the world, which can increase their capacity and humility in them. Equality does not mean that all of them are exactly the same. Each person should get income and property according to his ability and capacity. But the person, who has any shortfall in any of them, should also get easily food, clothing, housing, education, health services, security, water, power and transport at the minimum level.
4. When every citizen in the world gets respect, rights and opportunities.
5. In addition to the above, all the means of entertainment should be available, especially by tourism. For this purpose, every citizen should get the money spent on tourism for one month in a year, by the government.

What steps should be taken to get as mentioned above?

1. **Ban on Arms and ammunition and disarmament:** To do this, arms and ammunition should be completely banned. In the beginning, if anyone is found to have arms and ammunition other than by Police and Army in each country, such a person should be declared as a traitor and penalty should be death.

Gradually, Nuclear and other weapons should be completely banned and destroyed by which disarmament can be enforced.

2. **Use of oil:** Oil should be used in other works instead of vehicles such as making of plastic roads etc. Solar power production should be increased, thereby reducing pollution and solving the problem of Global warming.
3. **Use of technology for humanity:** Technology refers to science. Science means special knowledge, which is produced by God in a particular person.

The use of technology should be only for the welfare of humanity, because any special technology is produced / born in a particular person especially by God and it is only the gift of God. Therefore, it should be used only for the welfare of mankind.

In order to carry out this work, any kind of technology which is available in our country India that should be used by any country in the world.

4. **Natural Resources:** How should Natural resources be used in each country? Whatever resources are available in a country that should be used for themselves first and after that should be used in such a way that the welfare of the world can be made. How role of gold should take place in future has been described as under:-

Role of Gold in International trade

Q: What are the uses of gold?

A: It can be beautifully shaped and sculpted and can be used in electronics goods to some extent, for filling of cavities in teeth and in medicine etc.

Q: What is practical utility of gold in human life?

A: Practical utility of gold in human life is very limited. It can be used for making of jewellery for beautification and to some extent can be used in electronic goods and medicines etc only.

Q: Why gold is so expensive?

A: Being scarce as compared to other metals, therefore, it is expensive. But considering its utility in human life, this metal is too expensive.

Q: There is a tradition in the world that the country that is having more gold reserves is considered rich, but there is one question how and why?

A: Any metal which is proportionately less useful for improving quality of life of a human being is not worth its value for which it is sold in the market, considering the quantum in which it is produced in a country or in the world.

In our opinion intrinsic value of gold is not even 10% of the present market value at which it is generally traded in the International market.

Q: What should be done in future?

A: Utility of gold should be for the betterment of human life. As use of gold in medicines can help in improving health of human beings, therefore, should be used for that.

5. **Information Technology:** Use of Information Technology in every business and other fields wherever it is necessary should be used, so that the welfare of the world can be made. It should be used in such a fashion that we do not make the slaves but use it for our convenience.

6. **Artificial intelligence:** We believe that God who created the humans, can only be the most intelligent no one else. The need and use of artificial intelligence should not be done, other than automation functions, because today due to automation, a man in the world does not have sufficient work and if the use of artificial intelligence has begun, then unemployment in the world will spread rapidly and this gift of God will be disrespected.

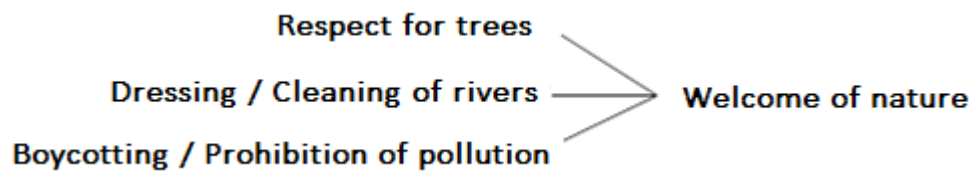

Benefits of Artificial Intelligence will be to a selected very few and affluent one only. A common man will get nothing out of it. It will also lead towards disparities amongst fellow citizens of a country. Therefore, we believe that the use of artificial intelligence should be taboo in the world.

7. **Infrastructure:** The state-of-the-art infrastructure should be established in every region for the progress of the world and it should be used for the welfare of mankind.
8. **Steps to control Global warming:** First of all we have to understand what is Global warming? Water pollution and air pollution are mainly responsible for this. The place where the water and air is polluted, automatically climate will not be conducive, because the Water + Air = Climate.

$$\text{जल} + \text{वायु} = \text{जलवायु}$$

Apart from this, there are other pollutants such as fire pollution (burning of sugar, burning the remaining litter of crops etc.) Earth Pollution (due to the use of chemical fertilizer) Ether pollution (this is non-conductive of climate only.) All these pollution (fire, water, air, earth and ether pollution), is a cause of Global warming.

With the boycott of all these, we can destroy Global warming and its only formula is: -

9. Protection of Nature:

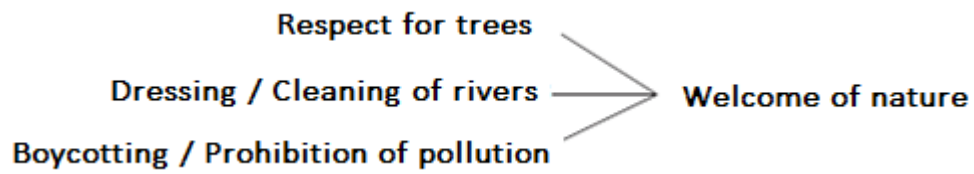

Nature includes : *Panchatattva* (Five elements) - Fire, Water, Earth, Air and Ether. Trees – Trees
Plants, Animals – Cattle's, Birds, Animals, Insects and Spiders etc.

1. Five elements include fire, water, earth, air and ether.

- **Fire:** We should not use sugar in fire like used in *Havan* (हवन), as it contains chemicals and spreads pollution, therefore, we should use pure honey for this purpose.
- **Water:** We should keep all the sources of water clean i.e. rivers, ponds, waterfalls, lakes, water bodies, wells etc.
- **Air:** To reduce air pollution, cycle should be the main source of transport within 5 km and battery/ electricity operated vehicles should ply. Every person should plant a tree and up bring it like a child, for the sake of children and for the self so that air pollution is reduced.
- **Earth:** We should not use chemical fertilizers as it makes the earth poisons and causes many incurable deceases, which is caused by the food produced from such land.
- **Ether:** We can call it an atmosphere or climate also. Climate of any place depends upon the quality of water and air of that particular place. If the quality of these will be pure/ better, automatically climate will be conducive /better for health and vice versa.

2. To take care of cattle's, birds and animals. To take care of animals, we should prohibit slaughter of cows and buffalos. Calves should be sent to the forest, so that their urine and stool can make the forests green and these calves can become the food for the animals by which they will stop coming to the cities.

3. We should take care of insects and spiders etc also as they are part of the nature.
4. To plant trees and to take care of them as a child, for the sake of children and our self.
5. To adopt and imbibe to welcome nature.

As we will develop nature, automatically nature will develop us.

Other than these remedies, there is no way out to end Global warming

Shri Paramdham, Meerut
